BE = Between Exercise, BS = Between Sets.

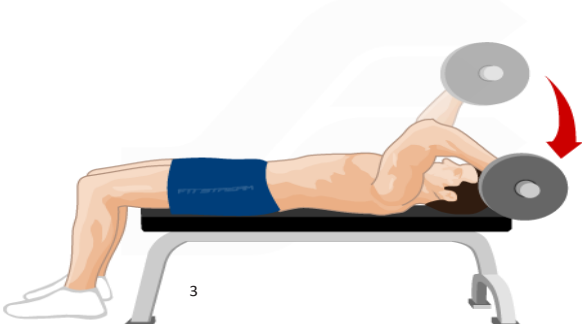

Figure 4. The model of CrossFit exercises for the main phase of training session

S. CrossFit training

No.	Exercises
1	 An illustration of a person in a black t-shirt and blue shorts performing a back squat. They are holding a barbell with two large black weights across their shoulders, with their feet flat on the ground and knees bent.
2	 An illustration showing a sequence of five figures in blue shorts performing a burpee. The sequence starts with the person in a crouched position, then they jump up with arms raised, and finally they land back in a crouched position.
3	<p data-bbox="113 1084 296 1167">Weight & Plyometrics</p>  An illustration of a person in a grey t-shirt and black shorts performing a medicine ball throw. They are holding a black medicine ball with both hands and are in a crouched position, ready to throw it. A grey ball is shown in the air to the right.
4	 An illustration of a person in blue shorts performing a tire flip. They are leaning over a large, thick black tire, ready to lift it.
5	 An illustration of a person in blue shorts performing a bench press. They are lying on a black bench with their feet flat on the ground. They are holding a barbell with two large black weights above their chest. A red arrow points downwards from the barbell, indicating the direction of movement.

7

8

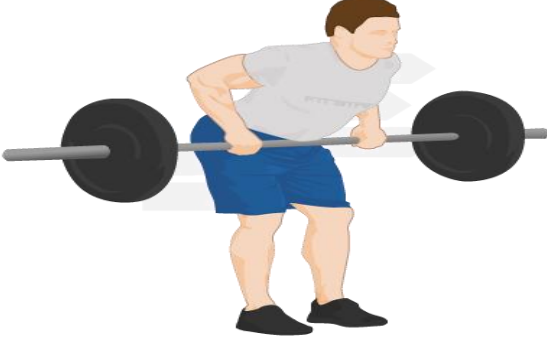

9

10

11	 An illustration of a muscular man in profile, wearing blue shorts, performing a bicep curl. He is holding a single dumbbell with both hands, lifting it towards his shoulder.
12	 An illustration of a man lying on a bench, wearing blue shorts and a black tank top, performing a bench press. He is holding a barbell with both hands above his chest.
13	 An illustration of a man in a grey t-shirt and blue shorts performing a deadlift. He is standing and holding a barbell with both hands, lifting it from the floor.
14	 An illustration of a man in blue shorts performing a lunge. He is holding a barbell with both hands above his head, with one leg forward and the other back.
15	 An illustration of a man lying on a bench, wearing blue shorts and a black tank top, performing a tricep extension. He is holding a dumbbell with both hands behind his head, lowering it towards his feet.

16

17

18

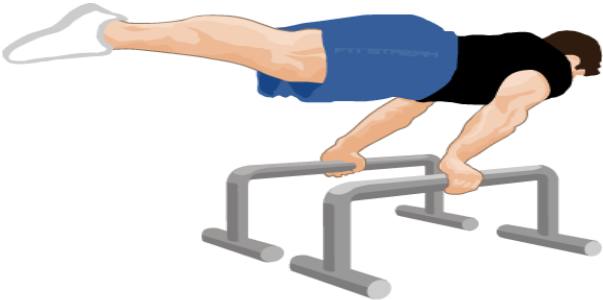

19

20

21	 An illustration of a man in blue shorts and white socks performing a sit-up. He is lying on his back with his knees bent and feet flat on the floor. His hands are clasped behind his head, and he is lifting his upper body towards his knees.
22	 An illustration of a man in blue shorts performing a push-up. He is in a plank position with his hands on the floor, directly under his shoulders, and his body is straight from head to heels.
23	 An illustration of a man in a black t-shirt and blue shorts performing a pull-up on parallel bars. He is hanging from the bars with his arms fully extended, and his feet are raised off the ground.
24	 An illustration of a man in blue shorts performing a lunge. He is in a three-point stance with his right leg forward and his hands resting on his right knee.
25	 An illustration of a man in a black t-shirt and blue shorts performing a back bridge. He is lying on his back with his knees bent and feet flat on the floor. He is lifting his hips to form a bridge shape with his body.

Appendix (B) : Testes

Vertec® Jump: The Vertical Jump Test was conducted using (JUMP USA, Sunnyvale, CA, USA) [24,25]. which consists of a set of rotating plastic vanes arranged in half-inch increments attached to an adjustable metal pole. Participants stood beneath the vertec, performing jumps from a uniform position, facing the vanes at a distance of 10 cm from the vertec, with their dominant shoulder aligned with the end of the vanes. Participants were instructed to jump as high as possible, using their dominant hand to reach and displace the highest plastic vane by swinging their arm at the peak of their jump. The jump height was calculated by counting the number of vanes displaced above the metal pole, which was then converted from inches to centimeters. Each participant performed three attempts, with a 30-second rest interval between each attempt, and the best jump height was recorded.

Medicine Ball Javelin Quadrathlon: Each subject stood with the feet parallel, and about shoulder width apart, slightly staggered in the throwing direction. They cupped the ball in both their hands and placed it in front of the body of the football and there was a general teamwork effort to push the ball forward. In the view of three-step throw, the athlete started the throw with feet joined together and was allowed two steps with the ball into the throwing box the last step was allowed after the ball was released. This distance was taken from the front foot, at the time of release of the ball to the time the ball touched the ground. An assistant took down the measurements from each throw made by the participant. Every subject was given the chance to take three shots, and the longest distance was recorded [28,29].

Plank Test (P): This is a test to measure the strength of the core muscles. The aim is to maintain the elevated plank position for as long as possible. The body is flat on the ground with the elbows and forearms, the legs are straight, and the weight is supported by the toes. The hips are lifted off the ground to create a straight line from the head to the toes. Once the subject is in the correct position, the stopwatch is started. The head should be facing the ground and not forward. The test ends when the subject is unable to maintain a straight back and the hips are lowered. The test is calculated by the time it takes the participant to be in the correct position. The participant is given two attempts, and the best attempt is scored [25,26].

Rebound Test: The player is asked to stand at the starting point 1 meter away from the Basketball Rebound Height Tester Model GA-5503 (Changsha, Hunan Province, China) (figure 2.). When the start signal is heard, the player must run towards the device. The player jumps vertically to try to catch the placed basketball. The player is allowed three attempts to achieve the highest jump possible. The highest height achieved by the player in the three attempts is recorded.

Modified T-test (footwork skill): Measures the rate at which the feet are moved either forward, sideways or in backward manner. The test involves a tape measure, marker cones; a stopwatch, Basketball, and FitLight. Where, Four cones (5 yards = 4. 57 m, 10 yards = 9. 14 m) are set up (see figure 3.). The subject starts at cone A. On the sound of the timer, the subject immediately goes to the side of the cone light with Fitlight and rapidly touches the light off with his right hand. He then banks towards the other side and then changes sideways to the other illuminated cone, and then taps on the light to switch it off and this is done with his left hand. He then sways left and touches the side of the third illuminated cone with his right hand before going to cone A. The process is repeated on all four cones. The attempt will not be counted if the subject steps one foot in front of the other during the shuffle, or if he/she does not touch the correct cone light. To the nearest 0 is counted the best of the three successful attempts of time. 1 second[27].
